

# Wi-Fi Equipment Front End Solutions

High Linearity and Low Power Consumption Devices for Wi-Fi Applications

**QORVO**<sup>®</sup>  
all around you

# Leveraging Qorvo Technologies for Wi-Fi

Qorvo® has a growing portfolio of leading products for Wi-Fi equipment including customer premise equipment (CPE), enterprise systems and internet of things (IoT) applications. Using a mix of Qorvo technological strengths, we focus on enabling the latest standards up to 802.11ac Wave 2 (1024QAM and 160MHz channels) while delivering front-end solutions that are at the forefront of low power consumption, high efficiency, improving compliance to bandedge and mitigating interference.

Our power amplifiers provide leading edge power consumption performance while still increasing throughput, range and regulatory compliance. These attributes give designers the capability to meet the performance needs of the market in smaller packages and with less cost spent on thermal compensation such as heatsinks or fans.

Our latest low noise amplifiers employ in-house semiconductor processes that achieve the next level of noise figures for better Rx sensitivity in Wi-Fi devices while maintaining linearities that keep up with todays 802.11 standards.

In filtering we are one of the few with Wi-Fi specific BAW solutions that combine high rejections, low insertion losses and stability over temperature.

As a leader in integrated front-end module (FEM) solutions, we take all the aspects in our discrete solutions and combine them into products that help achieve the same technical advantages in smaller footprints with optimization built in.

Qorvo's unique position and product offering in Wi-Fi enable today's and tomorrow's hardware needs.

## 5GHz Power Amplifiers
